

PORTRAITS OF FAITH

Four months into her second pregnancy, Delva was told that her baby had a rare chromosome disorder called trisomy 13. There was little chance for the baby's survival, and because Delva's life could also be at risk, doctors repeatedly advised her to abort the pregnancy. Faced with an uncertain outcome, Delva chose to trust Heavenly Father no matter what happened.

At eight and a half months, I went in for a 4D ultrasound.

In previous ultrasounds, doctors couldn't see any physical features. Because of this, they said our daughter's hands would be stubs and her face would be deformed. The images in a 4D ultrasound are more detailed, so when the technician began the ultrasound, I saw my daughter's perfect hand waving at me on the screen. I also saw two perfect eyes and a perfect mouth. I had an overwhelming feeling that she wasn't going to die.

When our daughter, MeLa, was born, specialists were standing by but were not needed. MeLa did not have trisomy 13. Doctors and specialists could not explain why, but my husband and I knew it was a miracle.
